1 Students earning a B.S. in the Liberal Arts must complete two semesters of Math. Individual departments may require specific courses to fulfill this requirement. Students earning a B.F.A. in the Liberal Arts may omit one Social Science course but the rule of 1st and 2nd discipline applies. B.F.A. students may also omit one Science/Math elective from the core curriculum.

2 Students take at least one foreign language course at Tulane. Students begin their language coursework at the placement level determined by the Language Learning Center, and from that point reach the highest competency level indicated for each school/program. International students who are native or fluent speakers of a language other than English and who are admitted to Tulane from countries where English is not the first language or their primary language of instruction will be exempt from the foreign language requirement.

**NOTE: Newcomb-Tulane College students completing their primary major in the School of Continuing Studies must complete the requirements for the degree with which the major is associated: B.A. (Digital Design; Health and Wellness; Homeland Security; Public Relations) or B.S. (Applied Computing).**
